AMERICA'S POWER COMPANIES: COAL IS NOT THE ANSWER

Dear Power Company Executives:

As an electric power consumer, I am joining Co-op America and shareholders across the country in calling on America's major power companies to address climate change now. The best way to respond to shareholder concerns on climate change is to halt your plans to build coal-fired power plants. There is nothing clean about coal, and it is not the answer to America's increasing energy needs. No matter what technologies are employed, new coal-fired power plants will contribute to global warming, air pollution, and environmental degradation from the mining and burning of coal. As the Earth continues to warm, threatening our health and economy, the US needs to be reducing, not increasing, its greenhouse-gas emissions. Nuclear power isn't the answer, either. It's not cost effective, increases our vulnerability to terrorism, and leaves behind toxic waste that lasts for generations.

I urge your company to invest in solar and other renewable-energy technologies. Only renewable energy will provide our country with energy security, reduce global warming, and create competitive jobs for years to come. I look forward to your response to my letter.

TAKE ACTION!

Please send in the attached postcard. We're embarking on a year-round effort to make power companies aware of their responsibilities. We'll be using these postcards in meetings and presentations to executives to demonstrate that consumers care about truly clean energy.
